

Release Notes

FROM THE COMPANY MAKING MARKETERS POWERFUL.

Date: Aug 13, 2025
Version 2.3.0

Summary

This week we're making your workflow smarter and faster. You can now upload Excel files straight into Adaly to query instantly, and we've made managing your chats a breeze with new bulk selection tools.

New Features

EXCEL UPLOADS Beta

You can now upload Excel (.xlsx) files directly into Adaly, then query them just like any other data source through MyData.

* Note *

Note: This feature is currently in beta. Adaly will pull context from your files, but it's up to you to review and refine that content. The clearer your context, the better (and more accurate) your responses will be.

A quick video demo is included to walk you through the process:

Feature Enhancements

BULK SELECT IN LIBRARY

Managing your chats just got faster:

- Select multiple chats individually, or hold Shift to grab a range of rows at once.
- Perform actions like bulk delete or bulk star in seconds.
- More bulk actions are on the way.

REDESIGNED SOURCE CARDS IN CHAT SIDE PANEL

We've refreshed the look of the source cards in the main chat's side panel for a cleaner, more organized feel.

- Each card now includes a list of sample queries to help you get familiar with the dataset.
- Jump straight into querying without having to think of your first question.

And that's it for now!
