

Release Notes

FROM THE COMPANY MAKING MARKETERS POWERFUL.

Date: Apr 15, 2025

Version 1.2.0

Summary

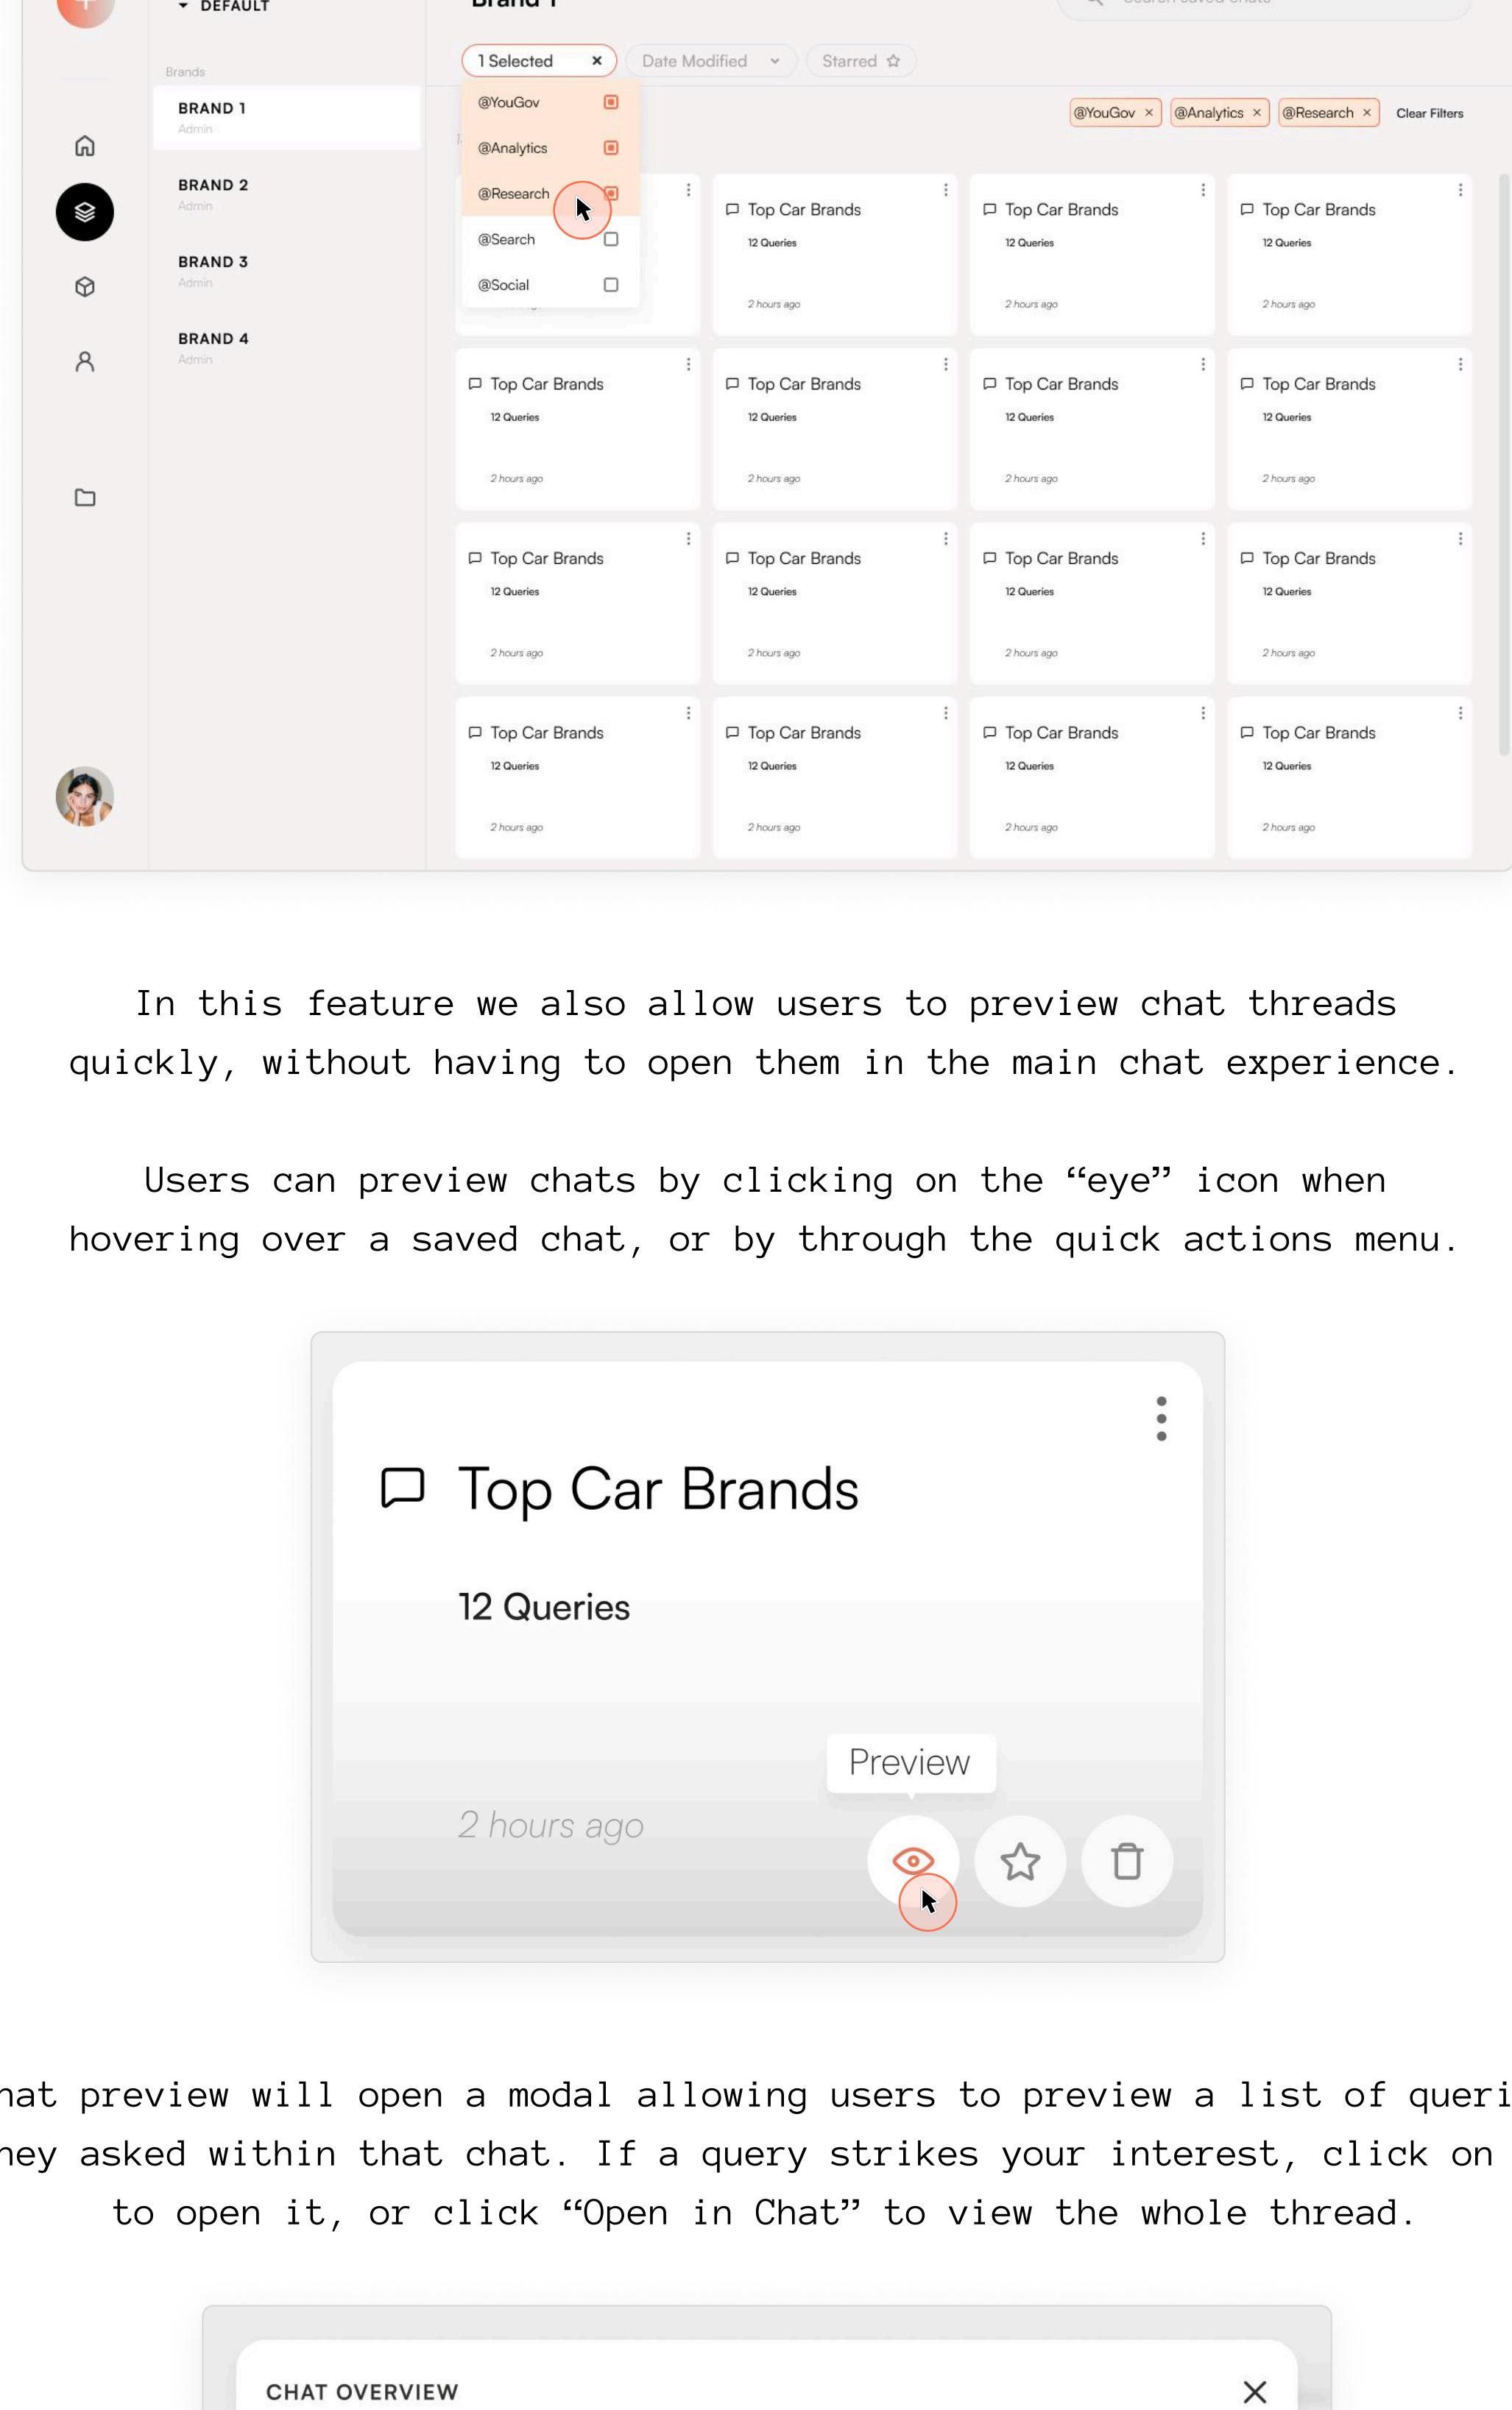

In this release, we introduce the Library feature which automatically saves and sorts chat threads for users, making them easy to revisit at any time. We also debut the enhanced @Research data endpoint, giving users access to more detailed responses.

New Features

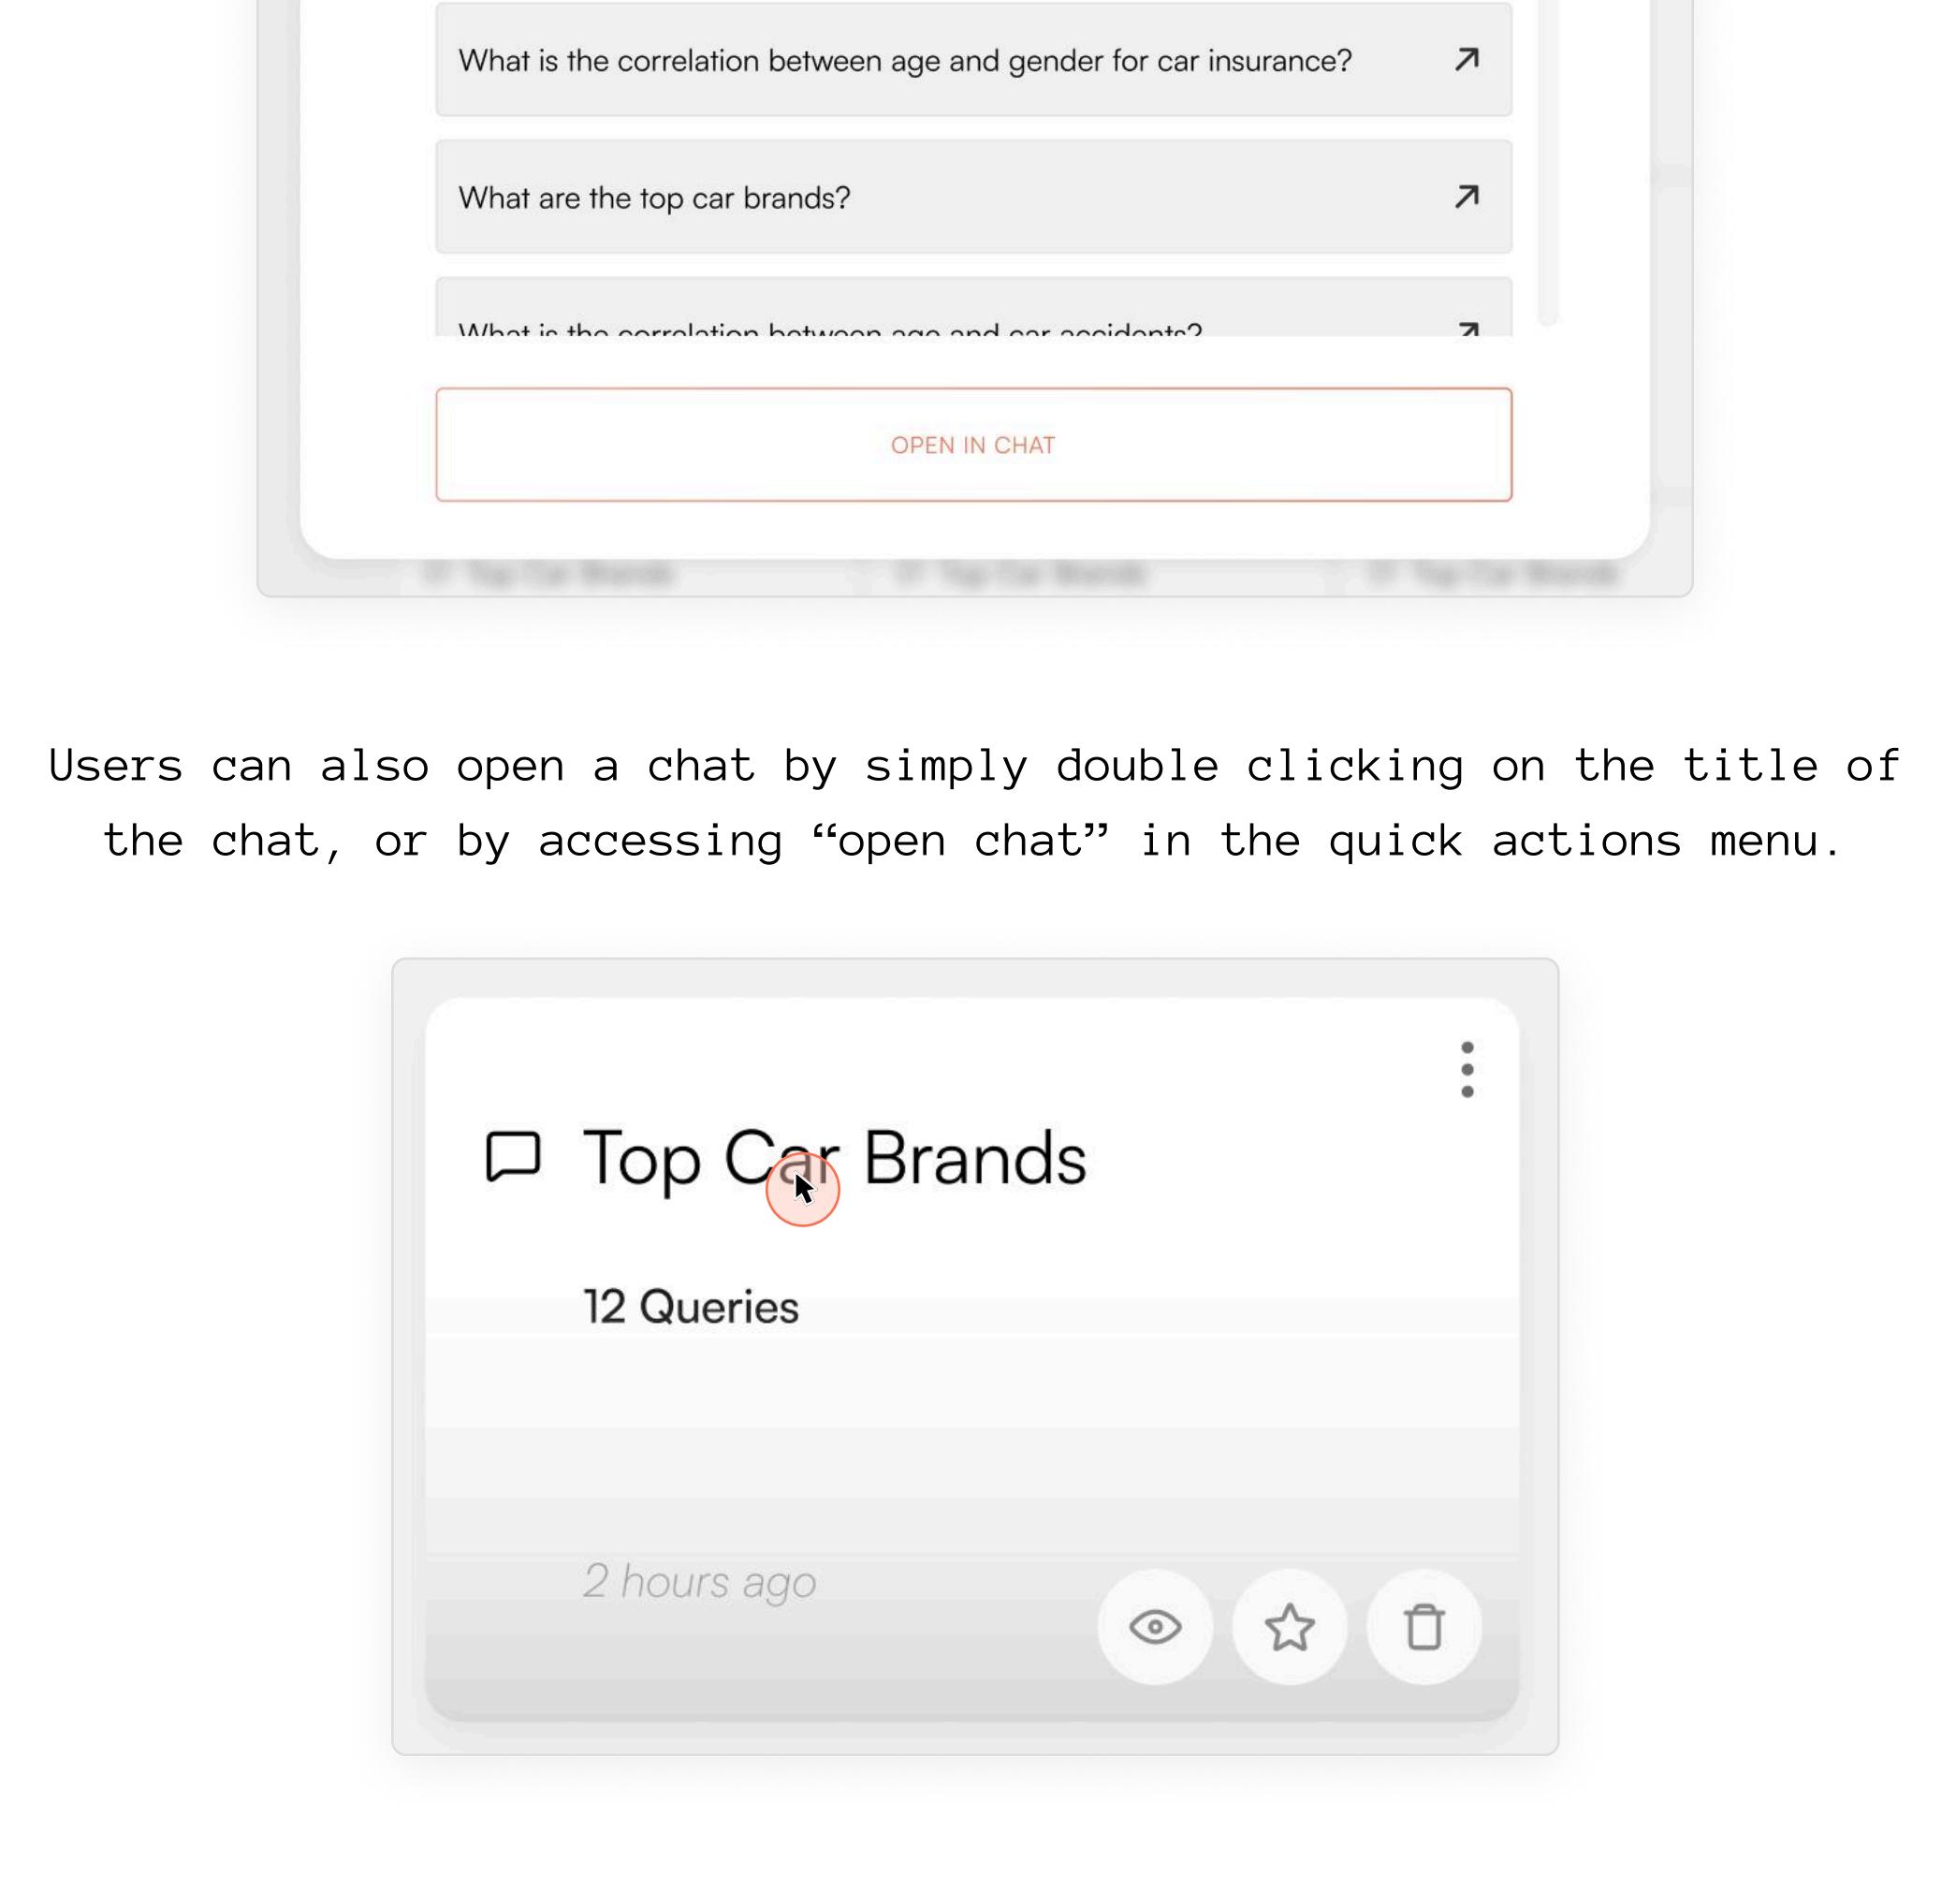

LIBRARY

Chat threads will now be saved automatically when users close their current chat, or open a new chat. Saved chat threads will also preserve chain of thought and can be viewed and reopened at anytime. Saved chat threads can be viewed through the Library page in the main menu navigation.

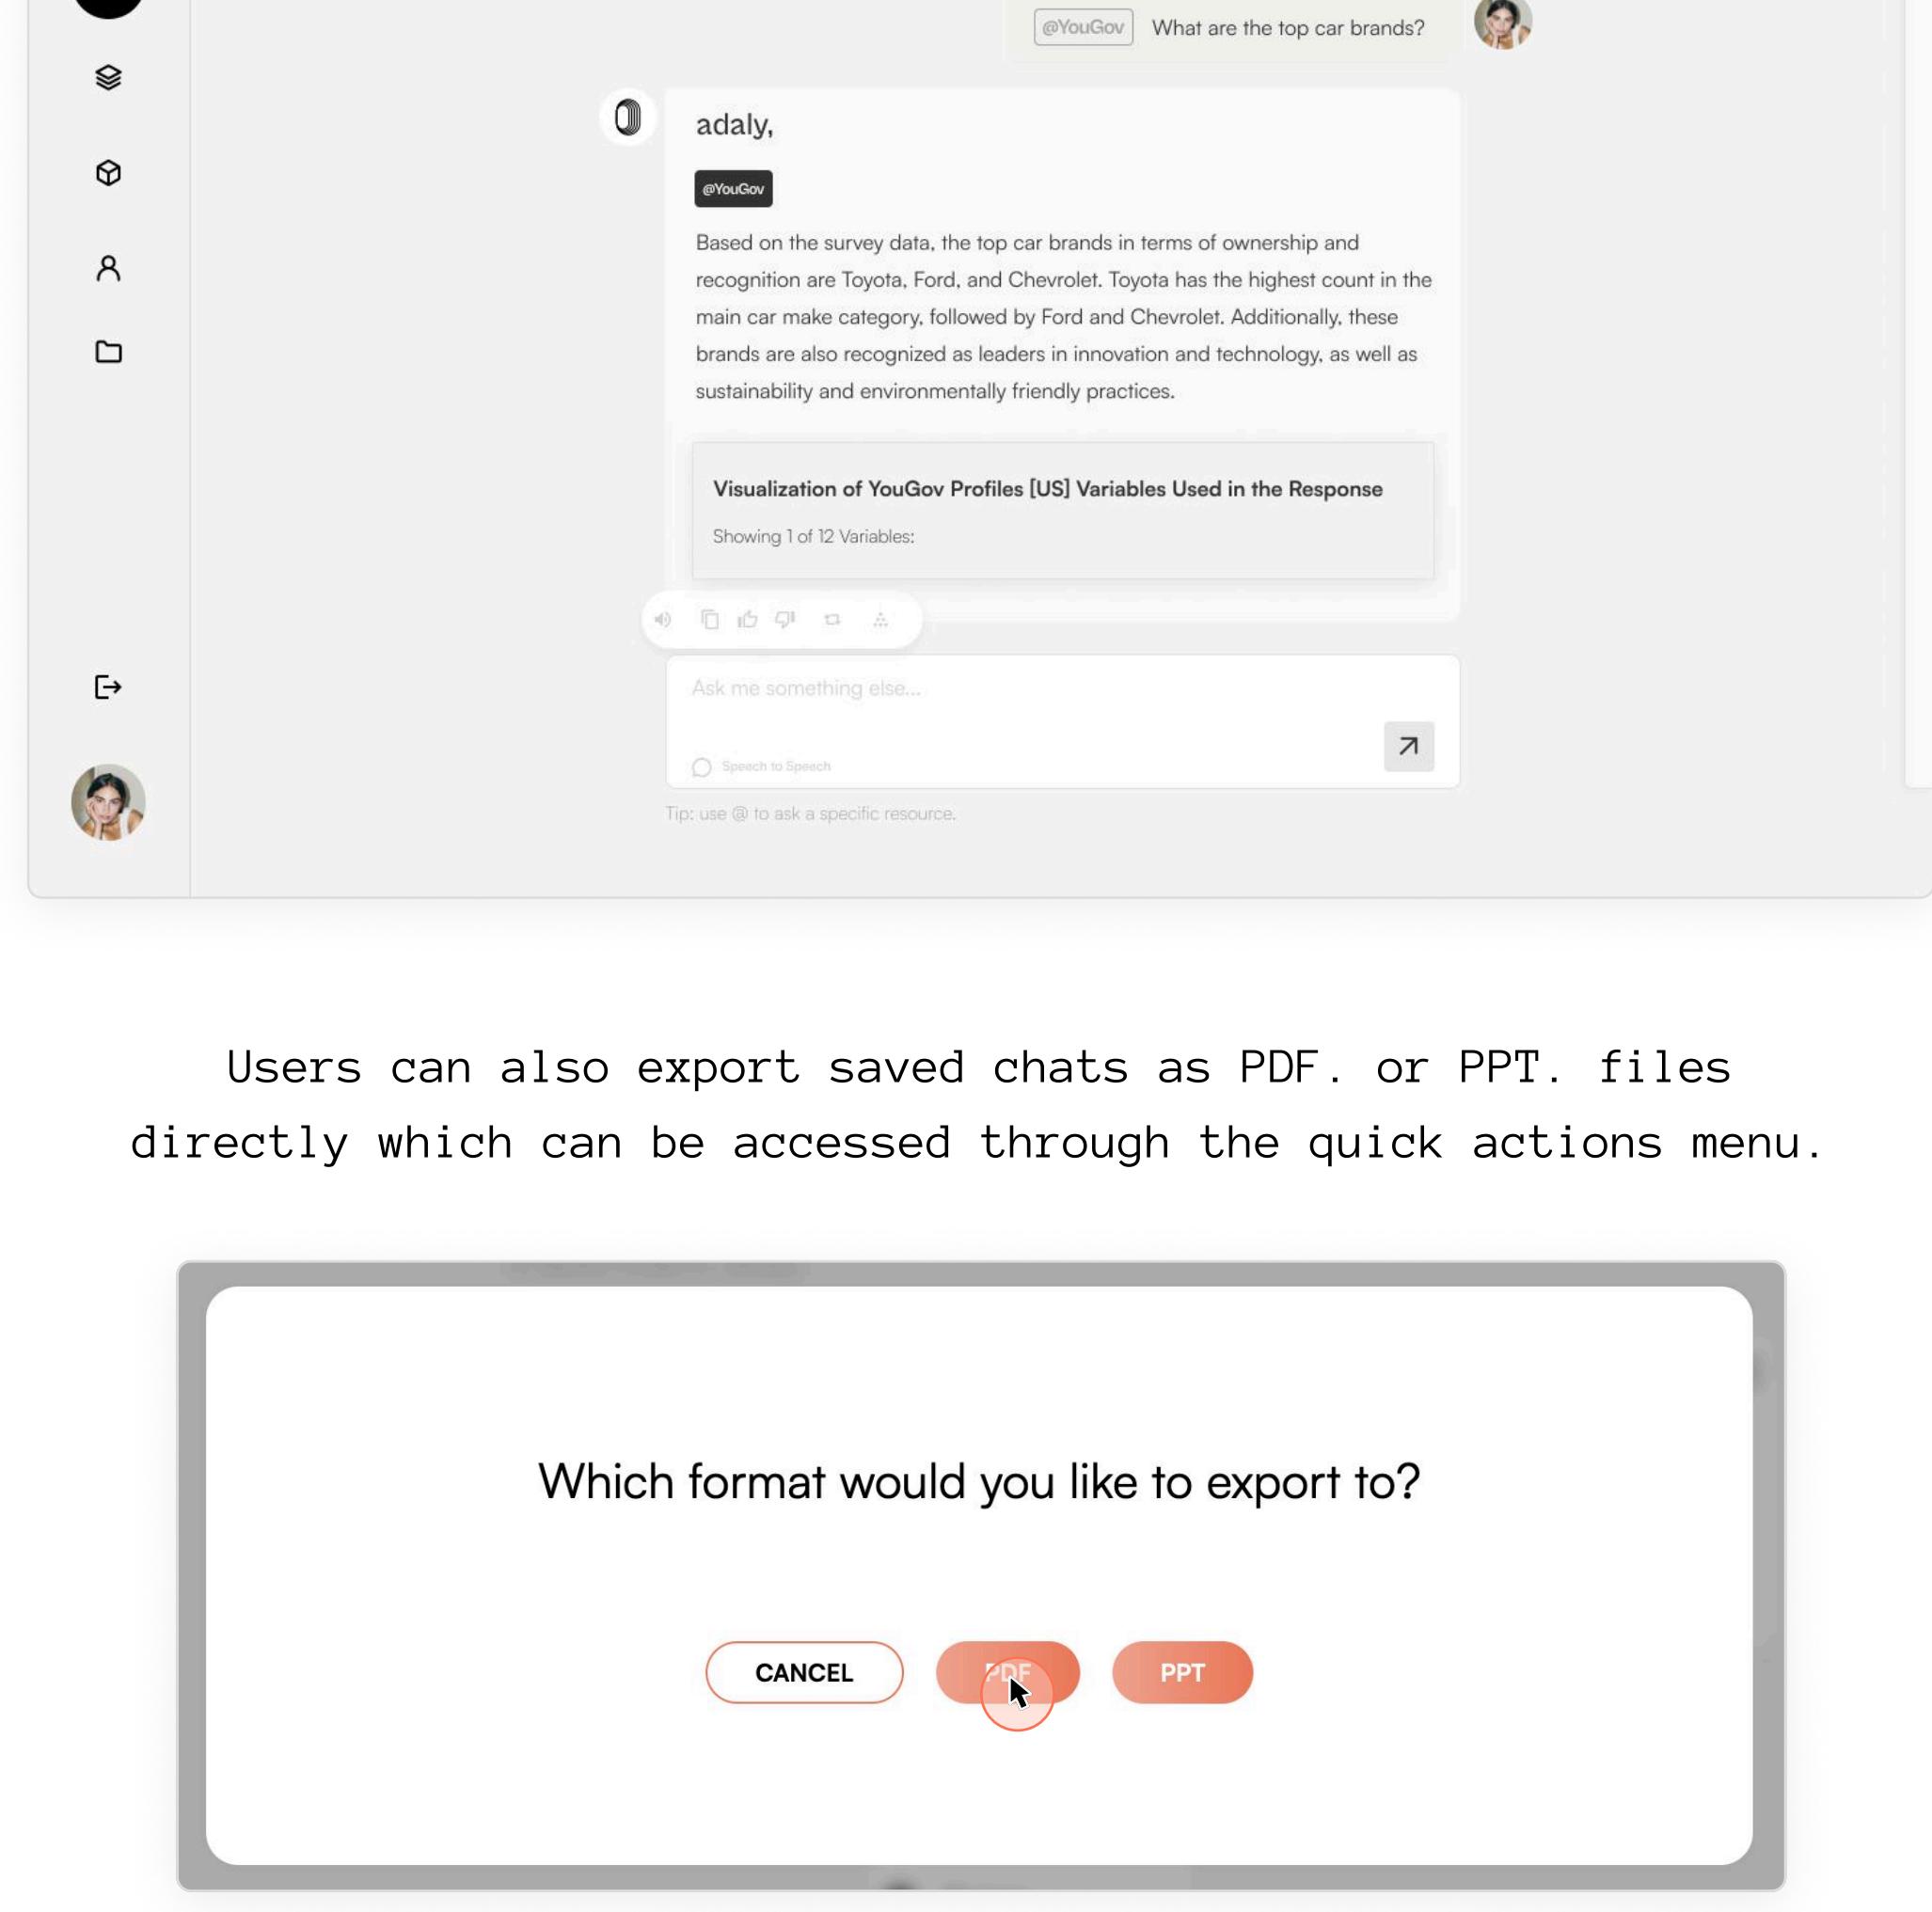

When saved, chats will be automatically be sorted based on the brand voice used during the duration of the chat. If no brand voice was selected, saved chats can be found under “Default” selection.

When a chat thread is saved, it takes on the first query asked by a user as its title. If a user chooses to rename a saved chat, they can do so through the quick actions menu selection.

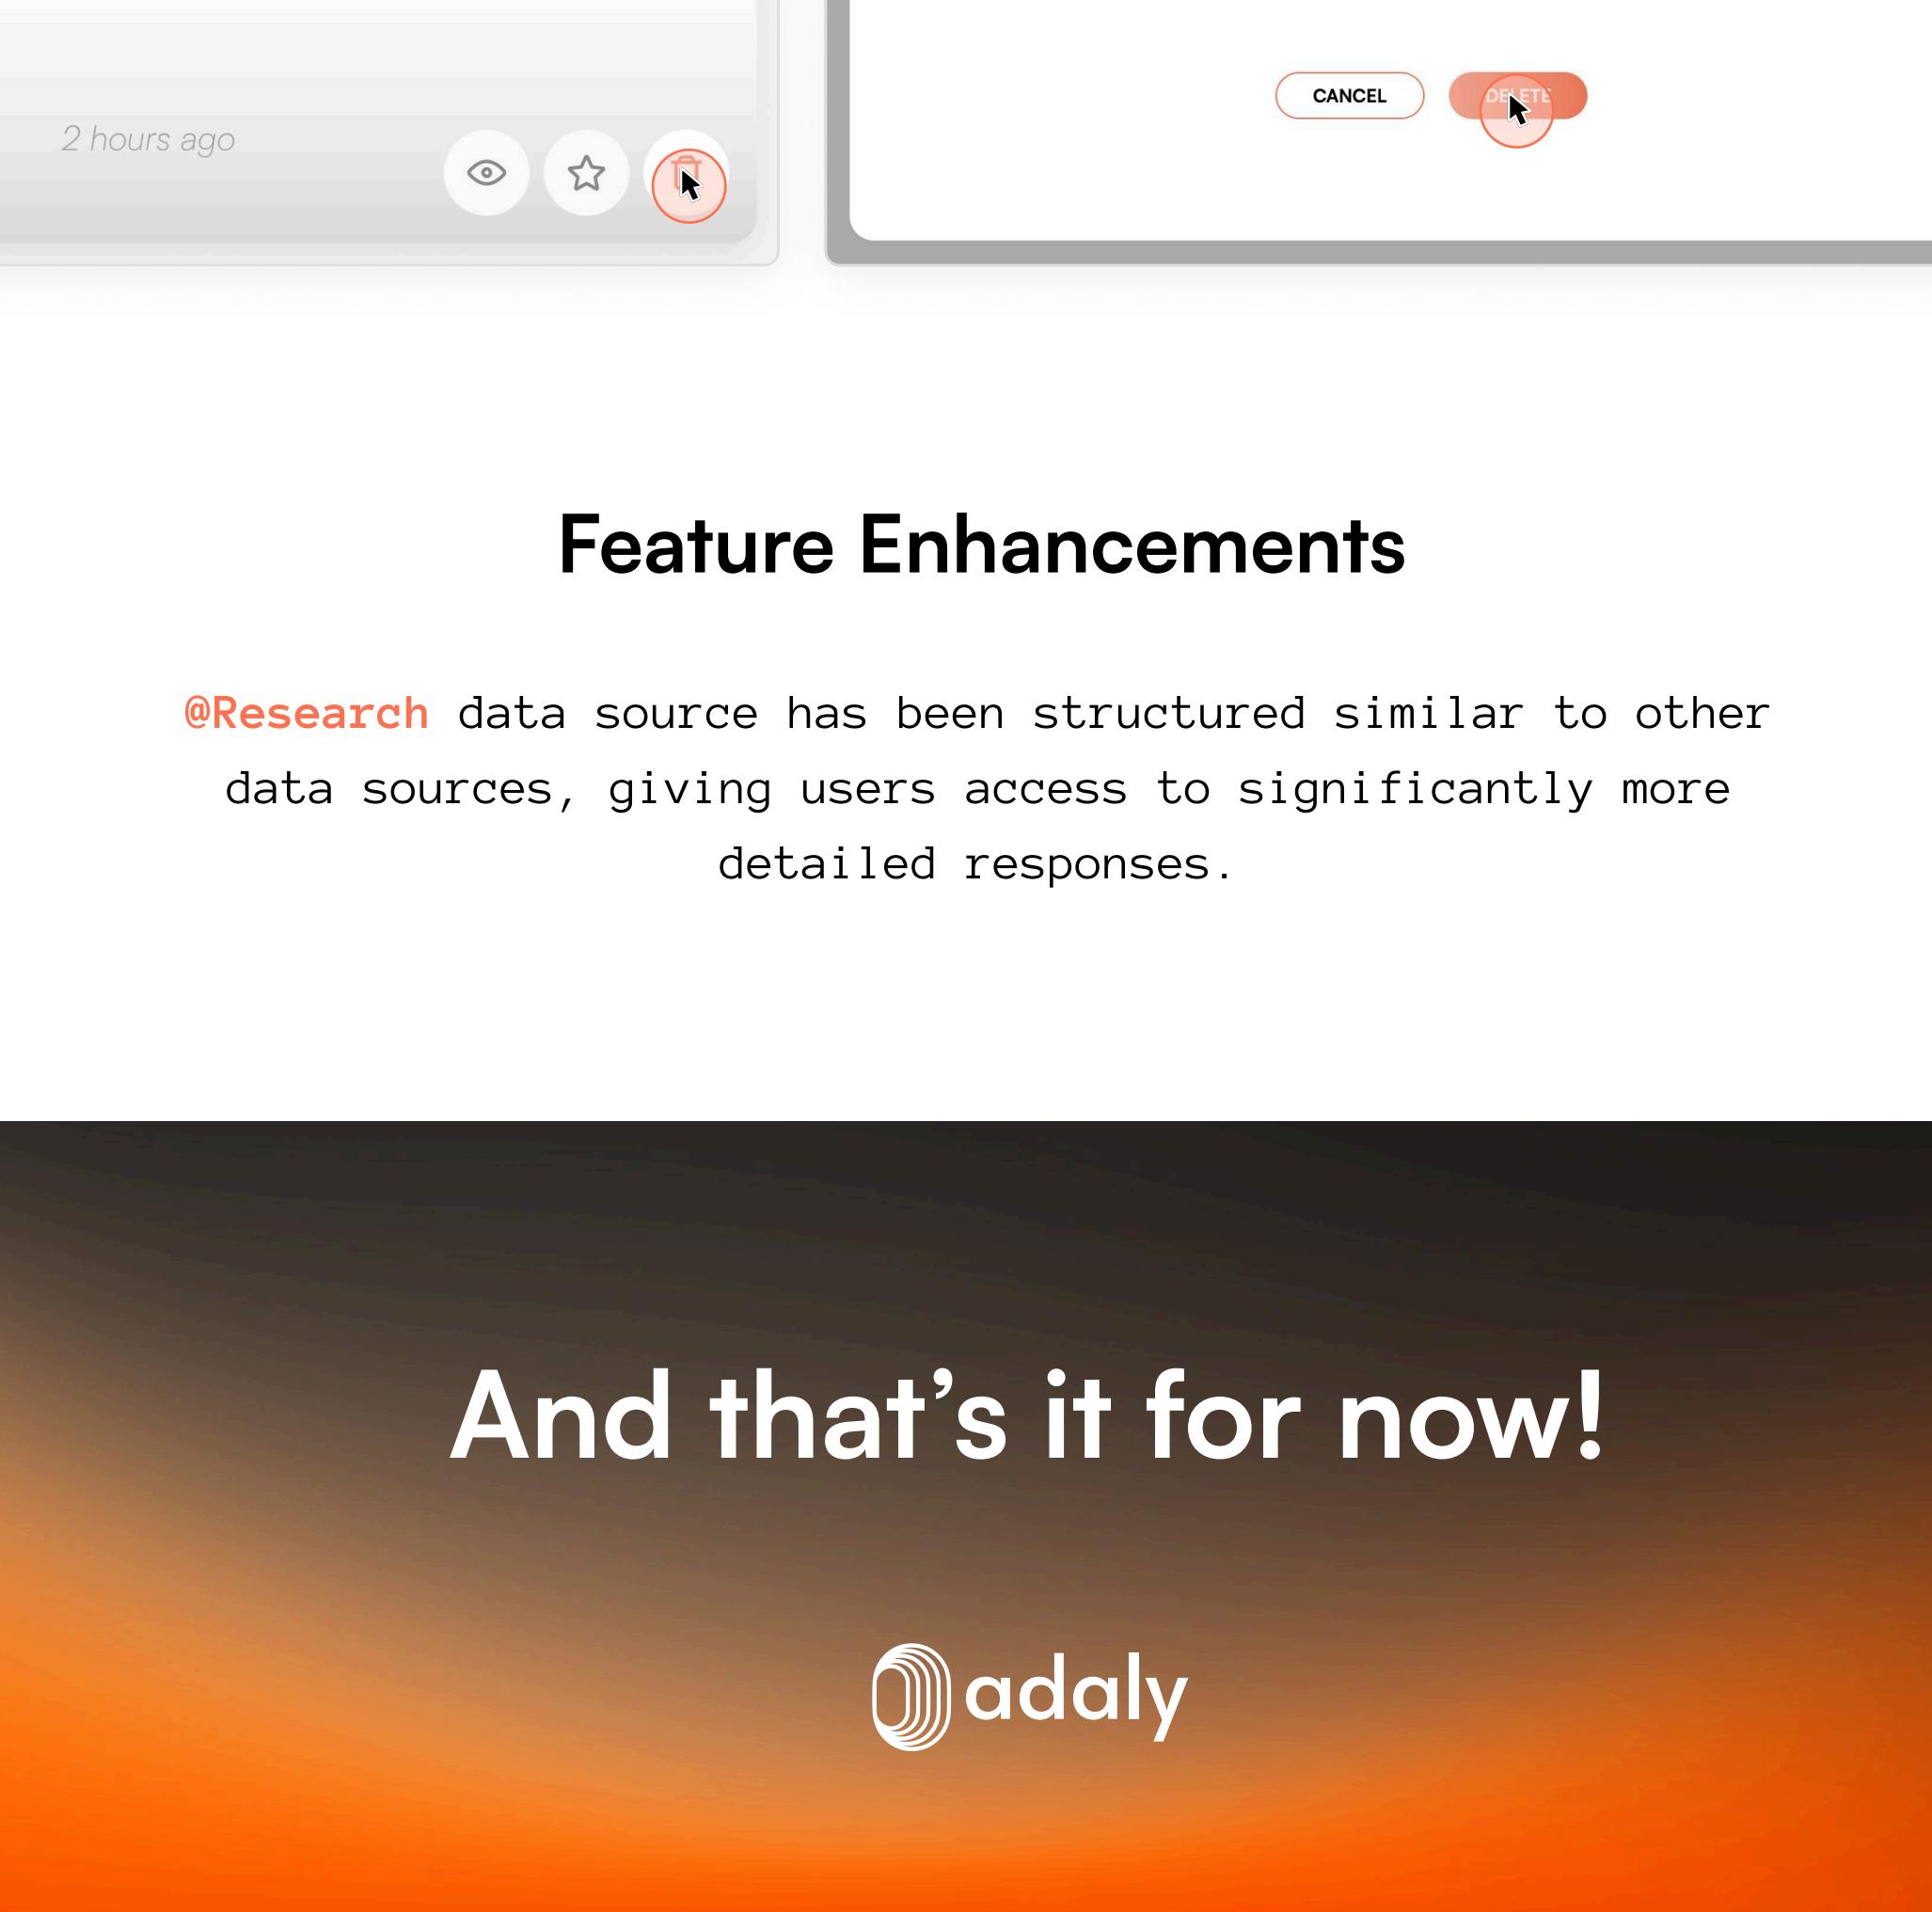

Users can also star saved chats to favourite them, making them easy to filter for and find later. Star can be found either by hovering over a saved chat or through the quick actions menu selection.

Users can filter saved chats by; integration used, date modified, and starred chats.

Stack filters on top of each other to be as specific as you want. Delete them one by one, or all together as needed.

In this feature we also allow users to preview chat threads quickly, without having to open them in the main chat experience.

Users can preview chats by clicking on the “eye” icon when hovering over a saved chat, or by through the quick actions menu.

Chat preview will open a modal allowing users to preview a list of queries they asked within that chat. If a query strikes your interest, click on it to open it, or click “Open in Chat” to view the whole thread.

Users can also open a chat by simply double clicking on the title of the chat, or by accessing “open chat” in the quick actions menu.

If you accidentally open the wrong saved chat, users can click on “Back to Library” button in the top left of the screen to quickly return back to the library page.

Users can also export saved chats as PDF. or PPT. files directly which can be accessed through the quick actions menu.

Because chats are saved automatically, users may find themselves with several saved chats in their library.

To clean up saved chats you no longer want, simply discard them by clicking on the “trash” icon on hover, or through the quick actions menu.

Users must confirm they want to delete a saved chat, this action cannot be undone.
